

Convicted: A Scientist Examines the Evidence for Christianity

Few scientists are willing to uncover the problems with evolution. Fewer still will boldly reveal the evidence that exists for the creation account. In this book Dr. Brad Harrub blows the lid off of the usual evolutionary dogma! This neuroscientist boldly details the evidence that exists for Christianity. Having walked through the halls of academia Dr. Harrub knows first hand the evolutionary icons and indoctrination practices used in the classroom. He has turned his scientific training against the very evolutionary theory that many defend as their own religion. This is a comprehensive book begins with the question of whether or not there is a God--using arguments of logic and reason to prove His existence. It is an excellent tool to teach why we believe what we believe. The book was professionally laid out, and was printed in full-color throughout. It contains multiple pictures, graphs, and tables to make it easy to understand. Not only does this resource cover the foundational principles like the existence of God, inspiration of the Bible, the deity of Christ, and creation vs. evolution, this book also covers topics that have received very little attention--many of which are issues that many Christians struggle with. For instance, this book also discusses worldviews, the Ice Age, radiocarbon dating (in an easy to understand format) and the question of distant starlight and time. The author declared: After years of careful and deliberate study and research, there is one thing I know for certain. Not only am I convinced... Im convicted! Brad Harrub, Ph.D.
