

Mexicos Free Trade Agreements - NAFTA and the Eu-Mexico Fta in Comparison

Bachelor Thesis from the year 2005 in the subject Economics - International Economic Relations, grade: 1,0, Jonkoping International Business School, course: Economics, 26 entries in the bibliography, language: English, abstract: Mexico has concluded various free trade agreements over the last decade, with NAFTA and the EU-Mexico FTA being the most important ones. In this paper, the effect of both agreements on bilateral trade is presented through descriptive statistics on the one hand, and by applying a time series analysis in the form of an export and import demand function on the other. The results of the graphical analysis indicate that the coming into force of NAFTA has led to a rise in Mexicos trade with that bloc, even though the econometric analysis does not support the assertion that the conclusion of the agreement is responsible for that. The EU-Mexico FTA has not led to a significant rise in Mexicos exports to the EU, mainly due to transport costs. These costs are also the dominant factor in explaining exports from Mexico to its NAFTA partners, and therefore lead to the conclusion that the change in transport costs over time is more important than tariff reductions granted by the parties. Interestingly, Mexicos imports from these two blocs are mainly determined by Mexicos GDP and the exchange rate, rather than by transport costs.
