

Excerpt from Natural Theology: Or Evidences of the Existence and Attributes of the Deity, Collected From the Appearances of Nature The present edition of the Natural Theology of Dr. Paley was undertaken with the view of making this admirable work more extensively useful than it could ever be under the form in which it has been usually circulated. A great proportion of those who have read it must have sensibly felt the disadvantage under which they labor in comprehending the descriptions; and of course the arguments of the author, from the want of a knowledge of the subjects to which they relate. No man could so well supply the want of this knowledge, by clearness of statement and description, as Dr. Paley; and it is probable that few other writers would have made a book so intelligible, which relates to subjects remote from common observation, without the aid of plates and illustrations. Still it must be imperfectly comprehended in many important parts, except by those acquainted with the sciences from which his illustrations are drawn. Enough it is true may be understood by all, to carry them along with the argument, and produce a general conviction of its truth. But the conceptions even of professional readers would be much more clear, definite, and satisfactory, were the description aided by visible representations. It was the original design of the publishers to have merely attached the plates and references of Paxton, which have been published in England and in this country in a separate volume, to the text of Dr. Paley. It was, however, suggested to them that the value of their edition might be increased by the addition of Notes, and they had made arrangements for this purpose and were going on with the work, when Mr. Paxton's edition of the Natural Theology fell into their hands, containing, beside the plates, a considerable number of Notes. From these Notes a selection has been made of such as seemed most valuable and interesting. A number of Notes have also been made up of quotations from the excellent treatise of Mr. Charles Bell on Animal Mechanics, published in the Library of Useful Knowledge; a tract which cannot be too highly recommended to the perusal of those who take pleasure in studying the indications of a wise and benevolent Providence in the works of creation. A few additional Notes have also been subjoined, which have not been before published. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
