

Shipping and Ports in the Twenty-first Century (Routledge Advances in Maritime Research)

Shipping and port systems are vital to societies and lifestyles around the world. In the late twentieth century, however, assumptions concerning the robustness of these systems were severely shaken by economic shocks triggered by oil crises. This volume explores how many of the consequent uncertainties have been resolved, and how adapted systems have been shaped to meet the challenges of the new millennium. To explore these issues, contributors focus on issues such as: economic integration of emerging economies - in particular China sectors as diverse as the high-speed ferry and offshore oil industries pollution problems generated by shipping. Contributors investigations, such as those into the homogenisation of the container industry and the port cluster concept and model vessels for the offshore oil industry, make for a rewarding book that will be of interest to academics working in many fields including transport studies, marine and coastal studies and economic geography. Professional organizations and policy-makers will also appreciate the book.
