

## Quantum Thoughts: Answers II (Volume 2)

We live in a permanent state of questioning everything around us. From our first contact with this world, our mind automatically begins to question everything at our sight. As we continue growing then our mind begins to question those things out of our sight, once we learn new ideas and concepts we begin to question the basic things in our existence. We reach a point in our quest for the absolute truth, when we learn that the same question could have several answers, even a different answer for every person, depending on their own experiences, education and general background. So I have intended in these series, to ask myself different questions to many aspects of my life and by sharing the answers to my own questionings I have learnt that many people share my views and feelings about many subjects. So I have decided to keep sharing my points of view, my own experiences and my own answers in the hope that the reader feels compelled to find his or her own answers by questioning my own inner dialogues. Thank you for being here and sharing this journey through life itself. May this be as exciting and rewarding for you, as it has been for me. Lets begin the quest for your own answers and Light.
